

IFGS HIGH UV STABILITY ADDITIVE FOR USE IN SPORTS SURFACES

We at IFG offer various additives for our customers'. One of them is UV protection, which plays an important role in many applications.

Outdoor sports surfaces, like tennis courts, need high UV resistance to last longer and maintain their appearance. Without proper UV protection, these surfaces can wear out and fade more quickly. IFG's polypropylene (PP) fibres with high UV stability help ensure that these surfaces stay strong and keep their colours.

Especially for use in tennis courts, we provide green and red coloured fibres, as shown in the picture below. Upon request, we can offer other colours to meet our customer's needs.

Along with standard PP fibres, IFG also offers recycled PP fibres. These are a more sustainable solution therefore a better option for the environment.
